

## Jump Seat Installation

**Installing your jump seats is simple. Follow these steps with stainless steel hardware for quick installation.**

- Veada jump seats are not designed as stand alone seats. The seat will need to be mounted next to a rear panel or wall.
1. Remove the jump seat cushion from the base. This will allow access to the marine plywood mounting supports on the inside of the base.
  2. Locate the horizontal marine plywood mounting plates. Pre-drill 5/16" holes on each of the 4 corners.
  3. Use one 1/4" x 20 molly bolt with washer OR #12 lag screw with washer per corner or four per base box (hardware not included).
  4. Ensure the hardware is fastened securely. Put the seat cushion in place for a snug fit.

Happy boating!
